University of St Andrews

As a small, research-intensive university with diverse subject range, we tailor our approach to match researcher expectations within Schools and Centres to meet funder requirements and the University Open Access Policy.

A diverse communication strategy

By employing a range of different approaches we are able to reach a substantial body of active researchers including many previously disengaged from our Current Research Information System (Pure). We continue to work in parallel with support staff in other Schools, to build local knowledge, and have helped set up mediated deposit hubs.

Results

Library and School effort is reflected in great deposit rates for compliance - RCUK (91%) and REF (85%).

Methods

Our simple message is “Act on acceptance: deposit in Pure”, and we have multiple strategies to amplify and embed this message. This is underpinned by granular knowledge of researchers and Schools. As partners in the Jisc Open Access Good Practice Pathfinder project Lessons in Open Access Compliance for Higher Education (LOCH) we continuously reviewed and introduced new strategies.¹ These include proactive REF monitoring email contact with researchers complemented by Library- and School-supported mediated deposit.²³

Future work

The processes will continually evolve. As compliance increases new challenges arise, such as maintaining momentum, tackling possible complacency, and integrating new staff into the deposit culture. The Library continues to help researchers deposit out-of-scope outputs and realise the benefits of Open Scholarship.
